

## What is claimed is:

[Claim 1] We claim:

A note-taking device for use with textual materials having a plurality of pages, wherein each said page has an outer edge, said note-taking device comprising:

a writing sheet having generally flat front and rear surfaces, and upper and lower edges, said front surface is adapted for the creation of notes thereon by a user;

a layer of releasable pressure-sensitive adhesive over a portion of said rear surface proximate said upper edge thereof, said layer being adapted for repositionable attachment to said one page of said textual material; and,

a locator tab having a front tab surface and a rear tab surface, said locator tab is integrally attached to the upper edge of said writing sheet, wherein the rear and front tab surfaces of said locator tab being void of pressure-sensitive adhesive thereon, whereby said locator tab is adapted to protrude beyond the outer edge of said page when repositionably attached thereto.

[Claim 2] A plurality of note-taking devices having the structure set forth in claim 1 which are repositionably attached together along the upper edge thereof via said layer of releasable pressure-sensitive adhesive in order to form a pad, wherein the rear surface of each said note-taking device lies adjacent the front surface of another said note-taking device there below.

[Claim 3] The note-taking device for use with textual materials of claim 1, wherein said writing sheet is generally rectangular in shape.

[Claim 4] The note-taking device for use with textual materials of claim 1, wherein said locator tab is generally frusto-circular in shape.

[Claim 5] The note-taking device for use with textual materials of claim 1, wherein said locator tab is disposed substantially at the central portion of said upper edge.

[Claim 6] The note-taking device for use with textual materials of claim 1, wherein said writing sheet and said locator tab are integrally formed from one piece of material.

[Claim 7] The note-taking device for use with textual materials of claim 6, wherein said material is paper or a flexible polymer.

[Claim 8] The note-taking device for use with textual materials of claim 1, wherein the front surface of said writing sheet has permanent indicia printed thereon.

[Claim 9] A pad comprising a plurality of note-taking sheets for use with textual materials, wherein said textual materials having a plurality of pages and each said page having an outer edge, each note-taking sheet comprising:  
a writing sheet portion having generally flat front and rear surfaces, and upper and lower edges, said front surface is adapted for the creation of notes thereon by a user;  
a layer of releasable pressure-sensitive adhesive over a portion of said rear surface proximate said upper edge thereof, said layer being adapted for repositionable attachment to said one page of said textual material; and,  
a locator tab portion having a front tab surface and a rear tab surface, said locator tab portion is integrally attached to the upper edge of said writing sheet portion, wherein the rear and front tab surfaces of said locator tab portion being void of pressure-sensitive adhesive thereon, whereby said locator tab portion is adapted to protrude beyond the outer edge of said page when repositionably attached thereto;  
wherein said plurality of note-taking sheets are repositionably attached together along the upper edge thereof via said layer of releasable pressure-sensitive adhesive in order to form said pad, and wherein the rear surface of each said note-taking sheet lies adjacent the front surface of another said note-taking sheet there below.

[Claim 10] The note-taking sheet of claim 9, wherein said writing sheet portion is generally rectangular in shape.

[Claim 11] The note-taking sheet of claim 9, wherein said locator tab portion is generally frusto-circular in shape.

[Claim 12] The note-taking sheet of claim 9, wherein said locator tab is disposed substantially at the central portion of said upper edge.

[Claim 13] The note-taking sheet of claim 9, wherein said writing sheet portion and said locator tab portion are integrally formed from one piece of material.

[Claim 14] The note-taking sheet of claim 13, wherein said material is paper or a flexible polymer.

[Claim 15] The note-taking sheet of claim 9, wherein the front surface of said writing sheet portion has permanent indicia printed thereon.
